

DUAL-AIR

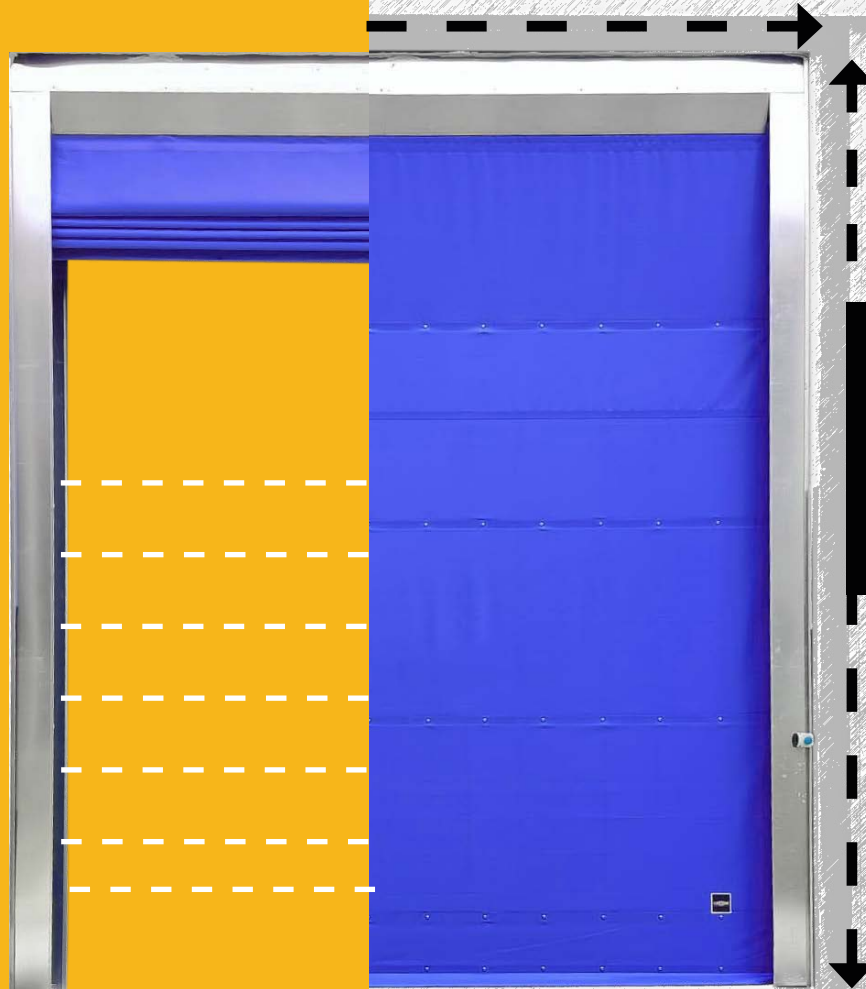

Video

Safety

The DUAL-AIR® is an innovation in folding type doors offering the highest level of safety:

- External and Internal 'dual' curtain;
- Lifting belts are located in-between the dual curtains so no risk of injury in operation;
- Pre-wired safety light curtains are integrated within the frame to reverse the direction of the DUAL-AIR® if obstacles or people are detected;
- Integral wind bars offer increased door security and higher wind resistance.

Dimensions

The DUAL-AIR® fold up door can be specified even on large openings up to 15 m x 10 m.

Performance

Integral wind bars offer excellent weather resistance to a wind load until Class 4.

Steel wheels mounted at each end also prevent the curtain from being dislodged.

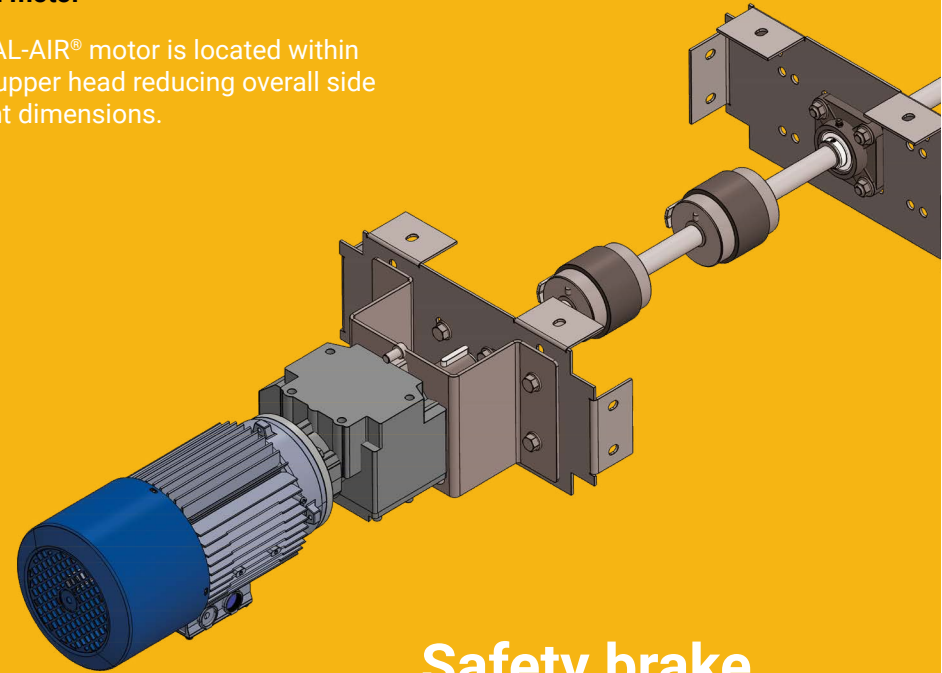

Insulation

Dual curtain creates an air chamber offering optimal thermal and acoustic insulation.

SafeDrive

Co-axial motor

The DUAL-AIR® motor is located within the top upper head reducing overall side and front dimensions.

Safety brake

More security

Integrated safety brake fitted as standard to increase safety of operation.
